AUTOMOTIVE TECHNOLOGY IN ELECTRONICS AND DIAGNOSTICS - ASSOCIATE OF APPLIED SCIENCE (AAS)

Description

The Associate of Applied Science in Automotive Technology in Electronics and Diagnostics prepares students to enter the field of electric and hybrid vehicle service. Coursework includes technical skills in computer applications, electrical, electronic, mechanical, hydraulic and network systems. Students will learn theory as well as application and will use the latest equipment to diagnose and repair alternative fuel vehicles.

Program Learning Outcomes

Upon successful completion of the program, students will be able to:

1. Communication: Demonstrate oral and written strategies for directing automotive employees to perform duties correctly and to communicate with managerial staff members clearly.
2. Certification: Substantiate knowledge of up-to-date automotive and service industry practices by successfully preparing for NATEF and Master Automotive Service Excellence certification (levels Al-A8 from Engine Repair to Engine Performance).
3. Preparation: Apply and maintain current skills in vehicle electrification systems diagnostics, including extensive computer networking that includes automatic highway braking, driverless vehicles, LAN radar, and automatic parking.
4. Professionalism: Model professional practices of the automotive industry and the needs of a service environment by demonstrating team attitude, displaying management behavior in regard to tasks, by behavior specific to management tasks related to the concern, and by keeping an orderly, task-based mindset of learned processes document.
5. Diagnose and Analyze Specialized Areas: Demonstrate how to use defined procedures to accurately assess problem solving in vehicle application issues, in personnel behaviors, and in addressing clients concerns in a manner that is most likely to lead to a successful outcome.
6. Advanced Vehicle Training: Demonstrate skills in electric drive vehicle systems by building competency in hybrid and electric vehicles, reprogramming and custom programming vehicle control systems, and application of clean diesel practices.
